

EXPERIMENT 7a – DATA VISUALIZATION USING TABLEAU

Aim:

To connect, analyze, visualize, and create interactive dashboards using **Tableau** for effective analysis of the **Tourism Dataset**, including tourist locations, countries, categories, visitors, ratings, and revenue.

Algorithm: Tourism Data Visualization using Tableau

Step 1: Data Loading

- Connect the **Tourism Dataset** to Tableau.
- Verify the imported fields:
 - Location
 - Country
 - Category
 - Visitors
 - Rating
 - Revenue
 - Accommodation_Available

Step 2: Tourist Visitors Bar Chart

- Create a worksheet for tourist locations and visitors.
- Place **Location** on Columns.
- Place **Visitors** on Rows.
- Select the **Bar Chart** visualization.
- Enable data labels to display visitor values.
- Use the chart to identify the most visited tourist locations.

Step 3: Category-wise Tourism Visualization

- Create a worksheet using **Category** and **Visitors**.
- Aggregate Visitors using **SUM**.
- Visualize the tourism categories using a **Pie Chart**.
- Display category names and corresponding visitor values as labels.

Step 4: Tourism Revenue Analysis

- Create a worksheet using **Location** and **Revenue**.
- Place Location on Columns.
- Place Revenue on Rows.
- Create a **Bar Chart** or **Line Chart**.
- Use the chart to compare revenue generated by different tourist locations.

Step 5: Tourist Rating Analysis

- Create a worksheet using **Location** and **Rating**.
- Aggregate Rating using **AVG**.
- Create a visualization to compare tourist location ratings.

- Display the rating values as labels.
-

Step 6: Country Filter

- Add **Country** to the Filters shelf.
- Select a particular country.
- Observe the updated tourist locations, visitors, ratings, and revenue based on the selected country.

Step 7: Minimum Visitors Parameter

- Create a parameter named **Minimum Visitors**.
- Set the required minimum number of visitors.
- Apply the parameter to display only tourist locations whose visitor count meets or exceeds the selected value.
- For example, when **Minimum Visitors = 500000**, display locations having 500000 or more visitors.

Step 8: Story Creation

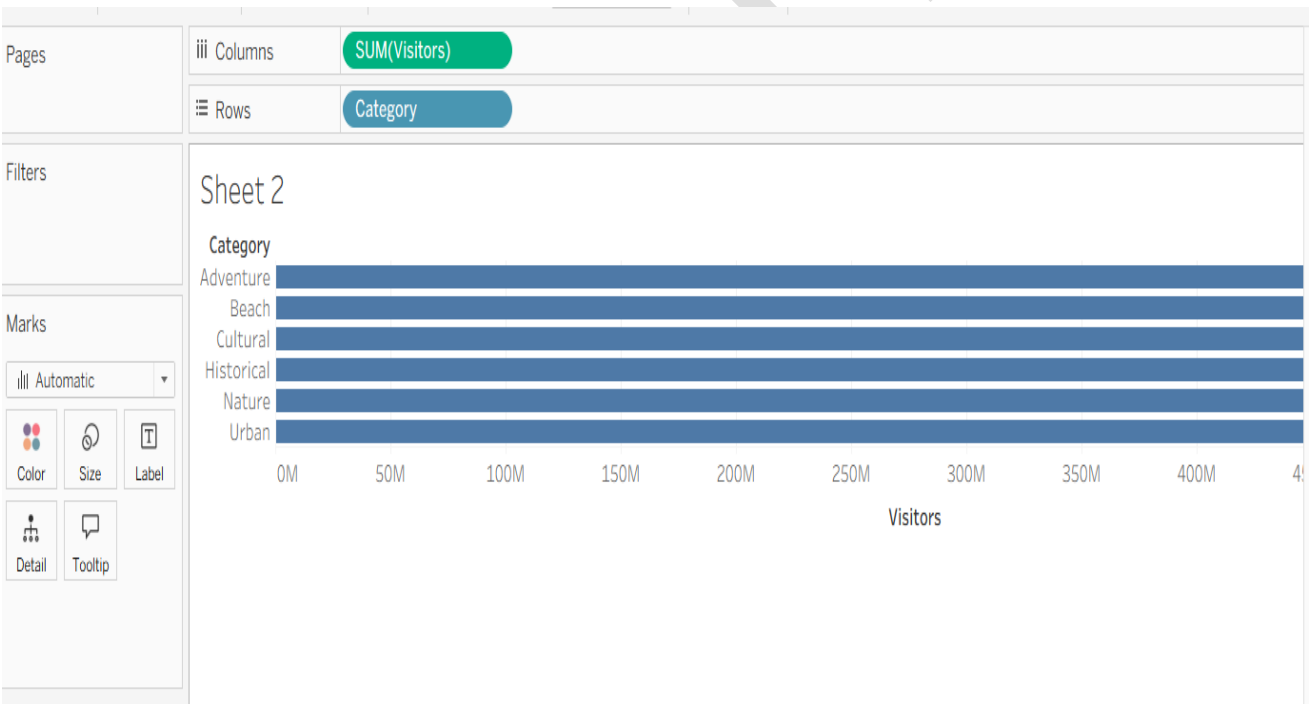

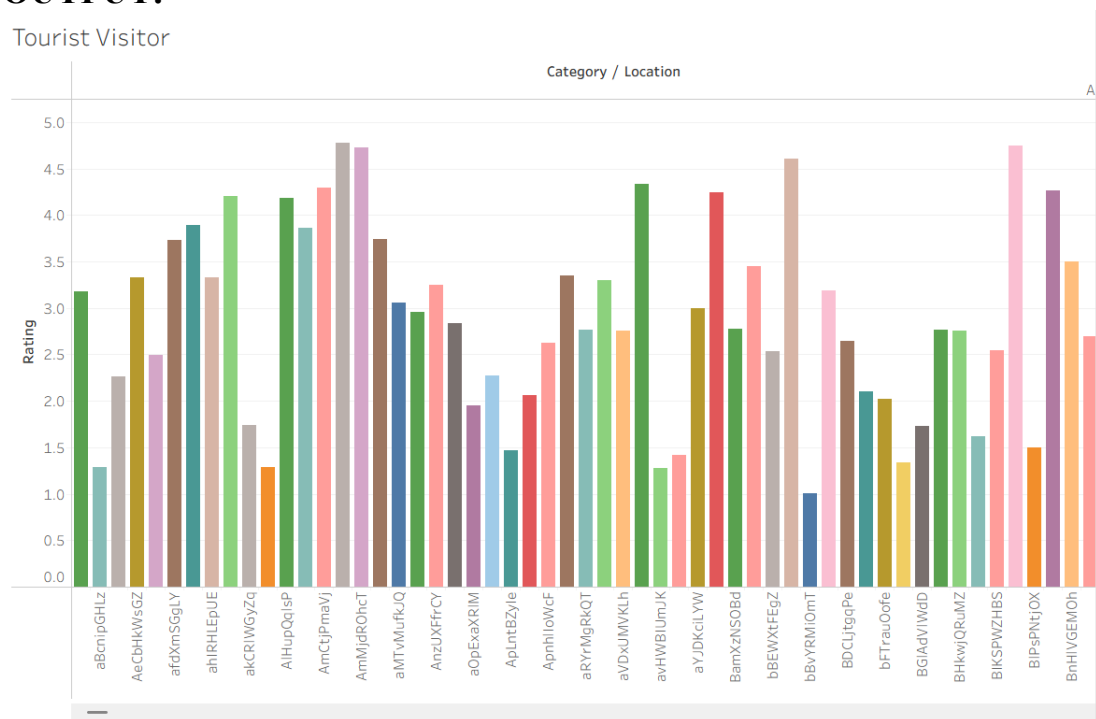

- Create a **Tableau Story** using the completed dashboard.
- Add story points for:
 1. Overall Tourism Analysis
 2. Country-wise Tourism Analysis
 3. Most Visited Tourist Locations
 4. Revenue and Rating Analysis
 5. Final Tourism Insights
- Present the visual insights using the story.

Step 9: Analysis

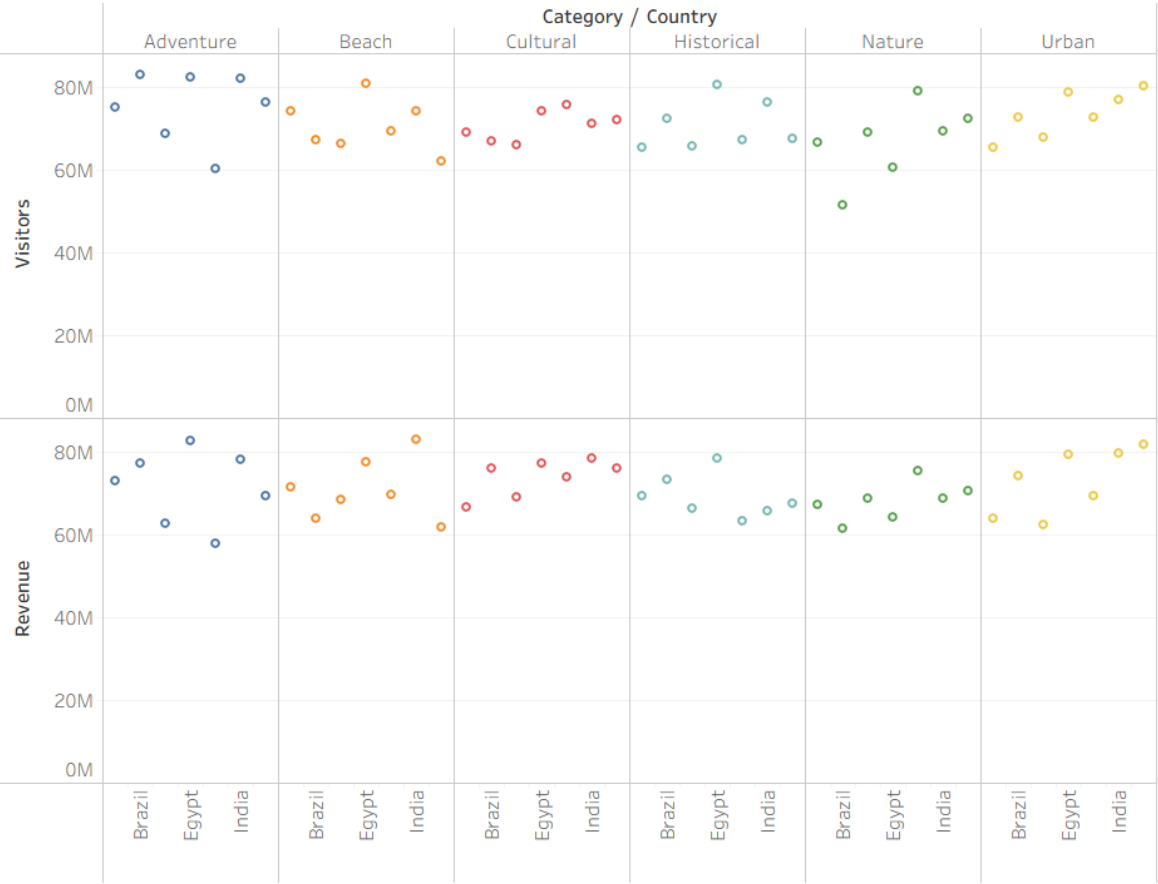

- Analyze the charts to identify the tourist locations with the highest and lowest number of visitors.
- Compare tourism data among different countries and categories.
- Analyze the relationship between visitors, ratings, and revenue.
- Observe how the **Country Filter** and **Minimum Visitors Parameter** dynamically change the visualizations.
- Use the dashboard and story to summarize the overall tourism data analysis.

OUTPUT:

Tourist Visitor

Sheet 2

RESULT:
